**CYBERPATHWAYS**

CYBER RISK AUDIT
SCAN. ASSESS. MONITOR. FORTIFY.

### Imagine understanding your business's cyber health inside out

It's not a matter of if, but when cyber criminals will come for your business. Applying basic techniques will no longer protect your business in the face of increasingly sophisticated attacks.

Nearly **43%** of cyber attacks are targeted at SME's. **Only 14% are prepared** for such an attack

54% of businesses admit their **IT teams lack experience** to manage complex cyber attacks
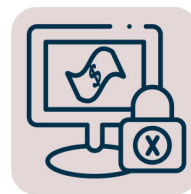

The average data breach cost in Australia is now **$3.35M**, taking **286 days from detection to containment.**

Upskill your team to identify weaknesses and prevent attacks.

No organisation is exempt from human risk; small, interrelated events can turn into sophisticated social engineering and phishing scams....and the ripple effect of these mistakes can have tangible consequences for businesses of all sizes.

It **CAN** happen to you

Our CyberRisk Audit will help you:

- Discover the sensitive data stored across your organisation
- Assess the handling of data within your IT ecosystem
- Understand behavioural activity happening now across your organisation
- Define acceptable compliance programs; educate and upskill your staff, customers and broader community on cyber security culture
- Receive clear prioritised recommendations for training, process and technology to support your organisation's Cyber Security roadmap and future investment decisions.

Do you understand your business's cyber risk profile?

Data Risk

9 OUT OF 10 ORGANISATIONS
Are shocked by the data risk they are unknowingly accepting.

CyberRisk Audit is an independent monitoring tool designed to monitor and report on actual processes and behaviours in use at your organisation. CyberRisk Audit provides an overview of High, Medium and Low risk activities giving you a prioritised risk profile and recommendations for fortification.

The benefits of CyberRisk Audit include:

- **Resource-light:** We won't tie up your IT teams for days on end. Our program requires a single day on-site, following by a 2-3 week forensic monitoring period to assess actual data flows and behaviours.

- **Independence:** We don't sell expensive hardware or software solutions. Our audit programs is platform agnostic and delivers a risk mitigation and improvement plan.

- **Tailored:** Highlights non-compliance across your chosen framework (ASCS Essential8 or ISO27001)

- **Detailed and fast:** In 3 weeks, you'll understand your cyber vulnerabilities, with reports suitable for Board/C-Suite presentations, with a clear path forward to reduce your cyber risk.

Would your employees take the bait?

Understanding where your data sits, who has access to it, and what they are doing with it, is the first step to creating a holistic overview of your cyber security posture.

- Data Storage
- Email usage
- Application usage
- Sensitive Data Access and usage
- File access & authorisation
- Actual Data Transfer Behaviours

Audit your business's cyber health, change behaviours, and embrace a cyber safety culture at your work!
