

## CYBER ESSENTIALS Cyber Security Awareness Training for your whole workforce

#### Customisable content

Time to complete: 40-60min

Self-paced online learning

## Upskill your team to identify weaknesses and prevent attacks.

Prevention is more cost-effective than remediation. Regular training is an investment that pays off by reducing the risk of incidents and the associated expenses of recovering from a breach.

Cultivate a Cyber Aware culture within your business, by team empowerment, through programs with defined learning outcomes, designed by expert Instructional designers. Build business resilience and grow your team's confidence in an increasingly challenging threat environment.

### Cyber Essentials training will:

- Mitigate human error: 95% of breaches are the result of human error. Targeted, right-fit training for different stakeholder groups empowers your team and sends the cyber criminals elsewhere.
- Fortify your frontline: equip your team with the knowledge and skills to recognise and thwart cyber threats. Turn your team into vigilant guardians against threats of phishing, ransomware and other malicious activities.
- Improve your risk profile: Minimise the risk of legal repercussions, business disruption and penalties, reduce your cyber insurance premiums and ensure your reporting and compliance obligations are met, year-round.
- Protect from emerging threats: New attacks are constantly emerging. Cyber Essentials content is constantly updated to reflect new tactics and vulnerabilities. Stay ahead of emerging threats with regular micro-learning scaled to your industry.

Cyber Essentials offers a scalable solution to fit your specific business requirements.

- Need one-off fast upskilling for your whole workforce? Looking for ongoing training to maintain ISO27001 certification and minimise your insurance premiums? Cyber Essentials for Employees is ready to go today!
- Looking for Bespoke training customised to your specific requirements? Integrate custom video, training topics and learning pathways to align with your organisation's policies and procedures

### Cyber Essentials Training Topics include:

Phishing

### Would your employees take the bait?

Optional additional testing simulations are available as part of your Cyber Essentials training package. Design a custom testing program to ensure your training is changing behaviours and improving your business's Cyber Culture.

# CYBER RISK AUDIT SCAN. ASSESS. MONITOR. FORTIFY.

## Upskill your team to identify weaknesses and prevent attacks.

No organisation is exempt from human risk; small, interrelated events can turn into sophisticated social engineering and phishing scams....and the ripple effect of these mistakes can have tangible consequences for businesses of all sizes.

## Do you understand your business's cyber risk profile?

9 OUT OF 10 ORGANISATIONS Are shocked by the data risk they are unknowingly accepting. CyberRisk Audit is an independent monitoring tool designed to monitor and report on actual processes and behaviours in use at your organisation. CyberRisk Audit provides an overview of High, Medium and Low risk activities giving you a prioritised risk profile and recommendations for fortification.

### Our CyberRisk Audit will help you:

- Discover the sensitive data stored across your organisation
- Assess the handling of data within your IT ecosystem
- Understand behavioural activity happening now across your organisation
- Define acceptable compliance programs; educate and upskill your staff, customers and broader community on cyber security culture
- Receive clear prioritised recommendations for training, process and technology to support your organisation's Cyber Security roadmap and future investment decisions.

## Imagine understanding your business's cyber health inside out

It's not a matter of if, but when cyber criminals will come for your business. Applying basic techniques will no longer protect your business in the face of increasingly sophisticated attacks.

Nearly **43%** of cyber attacks are targeted at SME's. **Only 14% are prepared** for such an attack

54% of businesses admit their IT teams lack experience to manage complex cyber attacks

The average data breach cost in Australia is now **\$3.35M**, taking **286 days from detection to containment.** 

### The benefits of CyberRisk Audit include:

- Resource-light: We won't tie up your IT teams for days on end. Our program requires a single day on-site, following by a 2-3 week forensic monitoring period to assess actual data flows and behaviours.
- Independence: We don't sell expensive hardware or software solutions. Our audit programs is platform agnostic and delivers a risk mitigation and improvement plan.
- Tailored: Highlights non-compliance across your chosen framework (ASCS Essential8 or ISO27001)
- Detailed and fast: In 3 weeks, you'll understand your cyber vulnerabilities, with reports suitable for Board/C-Suite presentations, with a clear path forward to reduce your cyber risk.

### Would your employees take the bait?

Understanding where your data sits, who has access to it, and what they are doing with it, is the first step to creating a holistic overview of your cyber security posture.

- 👫 Data Storage
- 👫 Email usage
- P: Application usage
- 🐏 Sensitive Data Access and usage
- 👫 File access & authorisation
- 🧛 Actual Data Transfer Behaviours

## Audit your business's cyber health, change behaviours, and embrace a cyber safety culture at your work!
